Eliminate Escalation

Introduction

Escalations cost credit unions valuable time and money — not to mention that they don't lend themselves to a quality member experience.

If your credit union has an escalation problem, then you know employees have to escalate questions to co-workers and managers because there's no other option.

Now, there is another option. This illustrated playbook will help your credit union:

- Identify the root cause of escalations
- Understand why your current tools aren't helping
- Learn how a Knowledge Operations Platform helps you decrease escalations

Eliminate Escalation

Here's how people describe the problem:

"New hires take forever to learn the job."

"Nobody can find the information they need. Employees are constantly asking others for help."

"Everybody does things differently."

"There's no clarity around how we do things...it feels chaotic."

"Things are always changing around here and it's not clear what to do."

"You can never truly move on from your previous role because people are always asking for help."

Eliminate Escalation

Here's what the problem looks like for frontline employees...

Thanks for calling our credit union! This is Jen. How can I help?

I was wondering what the time limit was for Bill Pay?

Sure thing! I think it's...
Hmmm...Let me see...

Can you hold while I get my supervisor?

3 minutes later...

Eliminate Escalation

Here's the thing:

Frontline Employees could handle more interactions on their own if they could easily access the right information in the moment they needed it. But since they can't, they have to escalate and ask others for help.

Eliminate Escalation

This behavior leads to tribal knowledge.

Tribal knowledge is the information that resides in employees' heads. It is knowledge that isn't captured anywhere, so it is transferred via word of mouth.

* If you don't know what Tribal Knowledge is, ask your neighbor.

Eliminate Escalation

Running on tribal knowledge results in...

Confusion

Stress

Interruptions

Long Training

Eliminate Escalation

But wait!

We have a knowledge base! People just don't use it!

Eliminate Escalation

Have you ever wondered why nobody uses your knowledge base?

The 3 main reasons are...

Eliminate Escalation

01

Search Stinks

Employees can't find the correct steps they need in the moment they need to respond to the question or request. Your intranet, SharePoint, the wiki — it doesn't search your content very well.

Eliminate Escalation

02

Guides are Difficult to Use

The truth is, even if employees could find the procedure, often times they would still struggle to read them in the moment they're dealing with a member.

The fact is, Word, PDF, and PowerPoint are not designed for creating guides that frontline employees can easily use and reference.

Eliminate Escalation

03

You Don't Have Guides for Everything

In our experience, credit unions typically only have guides for about **30-40%** of the possible inputs that frontline employees respond to.

Not only are they NOT in place, but credit unions don't have a process in place for identifying gaps and filling them in.

Eliminate Escalation

Employees do what's easiest

Your knowledge base acts like a wall and is actually making it **MORE DIFFICULT** to get help — which is why employees don't bother using it.

They go directly to somebody who can help because they trust that approach (and it's faster).

As long as co-workers are the fastest and most convenient source of knowledge, employees will always escalate questions and requests.

Eliminate Escalation

But wait!

Employees can just memorize everything!

Eliminate Escalation

Nope. They can't.

There are 3 big problems
with relying on memory.

Eliminate Escalation

01

There are a LOT of Inputs

Each day, frontline employees will have to handle over **30 different** transactions. But that may come from a pool of **100 to 500** questions and requests. Remembering the steps for all of those inputs is not realistic — especially when employees are tired, hungry, or stressed.

Eliminate Escalation

02

There is a LOT of Complexity

Some questions and requests may be simple, but there are several inputs that are complicated to process correctly.

The steps you take to process the request may change depending on several variables, and it's not easy to remember what all of those are.

Eliminate Escalation

03

There is a LOT of Change

Whether it's a new system, a new regulation, or a new policy you need to implement, change is pretty constant at a credit union.

Having to remember the new ways of processing inputs is difficult.

Eliminate Escalation

We can't remember all the details

Trying to get employees to remember all of the different inputs, steps, clicks, variables, and changes is like trying to pour a gallon of water into a 16 oz. glass.

It's not going to fit.

Eliminate Escalation

How do you escape escalation and tribal knowledge pains?

Eliminate Escalation

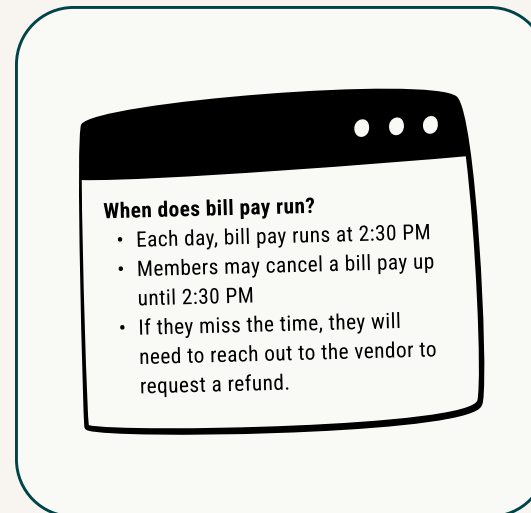

To eliminate escalations and escape tribal knowledge, you need to break down the barriers and make it easier for employees to get information in the moment they need it. That means having findable, followable, and scannable digital guides.

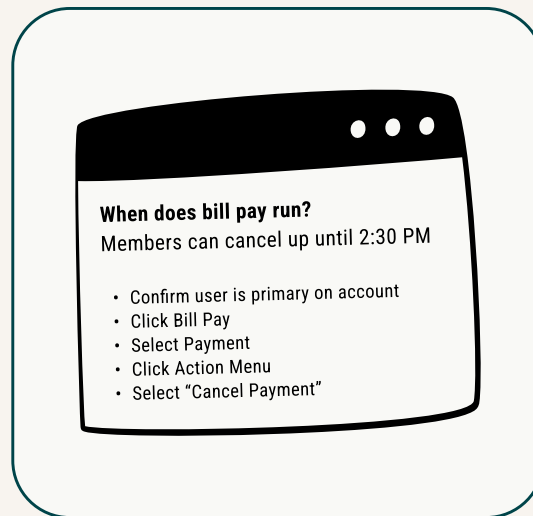

Eliminate Escalation

What does that look like?

Let's revisit our credit union scenario from a new perspective.

Eliminate Escalation

Eliminate Escalation

How do we provide a Google-like experience for employees?

Eliminate Escalation

Follow these 3 steps

You can create resources that employees will use each and every time they perform a transaction as long as you do these three things.

1. Identify

2. Capture

3. Optimize

NOTE: You will need a system to help you do these things. I'll elaborate on what we recommend and other options later.

Eliminate Escalation

01

Identify the Inputs Employees Need to Process

What are all the different questions and requests they have to respond to?
Before you start creating any guides, you must first identify what it is that employees are doing!

What's my account balance?

Why did I get charged a fee?

How can I see my account history?

Process an instant issue

Remove a joint owner from my account

Eliminate Escalation

Why start with identifying the inputs?

Instead of focusing on what information you want to write down (supply-driven), you begin by identifying **what information employees will need** (demand driven).

Old Way—Supply Driven

I'm going to write down everything I know!

New Way—Demand Driven

What inputs are people responding to?
What would be most helpful to them in those moments?

Eliminate Escalation

To identify what people need, do these 3 things...

1st — Pick a specific role

2nd — Identify the topics for that role

3rd — Write down all the inputs for each topic

Eliminate Escalation

1st – Pick a specific role

Call Center Rep

Loan Officer

Member
Service Rep

Teller

Eliminate Escalation

2nd – Identify the topics for that role

Share Draft/Checking

Mobile App

Credit Card

CDs

Cash

Bill Pay

Eliminate Escalation

3rd – Write down all the inputs for each topic

- How can I open a CD?
- What are the rates?
- How can I add funds to CD?
- How can I add somebody to the existing CD?

- How do I set up bills for payment?
- Is Bill Pay Service Free?
- Vendors said they didn't receive payment
- How do I delete a vendor?

Eliminate Escalation

02

Capture the Information

Most people have PTSD when it comes to writing procedures. **The truth is, we overcomplicate this.** All you need to do is start with the input and write down how you would respond if you were answering the question or request.

What is the Bill Pay Service Fee?

- First 10 vendors are free
- Over 10, pay 2% transaction fee

**You also need better
tools to capture knowledge**

Eliminate Escalation

Use better tools for capturing knowledge

If I were building a house, I would purchase a nail gun and a power saw. There's no way I would try to build it with a hammer and a handsaw.

The same goes for when you're creating an internal Google. Use tools that will make the job easier and faster for capturing your guides.

Eliminate Escalation

03

Optimize Guides for Frontline Employees

You must format your guides so that frontline employees can quickly scan them and follow them.

Eliminate Escalation

Employees now have a resource everyone can reference

When employees can find what they need and immediately get the information they need in the very moment they need it, they will use it instead of always escalating questions and bringing in others.

Employees now have a resource they can turn to, thousands of times a day, without interrupting anybody else's workflow.

Eliminate Escalation

Knowledge Ops Platform

If you want to eliminate escalations in your credit union, you need an agile tool that helps you capture, share, and maintain your digital guides quickly. That's why we recommend using a Knowledge Ops Platform.

While tools like SharePoint, Word, PowerPoint, or even a wiki or an Intranet provide you a way to write down your procedures, they are **not** designed to build the resources you need at the speed that you need them.

A Knowledge Ops Platform is the fastest way to capture knowledge, format it, and organize it so that employees have answers at their fingertips.

Eliminate Escalation
